ANNUAL ANNOUNCEMENT
AND
CATALOGUE OF STUDENTS
OF THE
FEMALE MEDICAL COLLEGE
OF
PENNSYLVANIA,
LOCATED IN PHILADELPHIA,
at No. 229 Arch Street,
FOR THE SESSION, 1851.

PHILADELPHIA:
G. S. HARRIS, PRINTER, 119 North Fourth Street.
1851.
OFFICERS.

PRESIDENT.
WILLIAM J. MULLEN.

VICE PRESIDENT.
WILLIAM J. A. BIRKEY, M. D.

SECRETARY.
WILLIAM S. PEIRCE, ESQ.

CORPORATORS.

WILLIAM J. MULLEN,
Hon. JOHN BOUVIER,
WM. J. A. BIRKEY, M. D.,
ROBERT P. KANE,
JOHN LONGSTRETH,
WILLIAM S. PEIRCE,
FERDINAND J. DREER,
HENRY GIBBONS, M. D.,
THOMAS S. MITCHELL, ESQ.,
WILLIAM ELDER, M. D.
FACULTY.

N. R. MOSELEY, M. D.,
Professor of Anatomy and Physiology.

ABRAHAM LIVEZEY, M. D.,
Professor of the Principles and Practice of Medicine.

JOSEPH S. LONGSHORE, M. D.,
Professor of Obstetrics and Diseases of Women and Children.

C. W. GLEASON, M. D.,
Professor of Surgery and Institutes of Medicine.

M. W. DICKESON, M. D.,
Professor of Materia Medica and Pharmacy.

DAVID J. JOHNSON, M. D.,
Professor of Chemistry.

N. R. MOSELEY, M. D.,
Dean of the Faculty, No. 229 Arch street.

MRS. HANNAH. E. LONGSHORE,
Demonstrator of Anatomy.

JANITOR.
HENRY F. BIRNBAUM.

**Total 40**
ANNOUNCEMENT.

In pursuing the ancient and time sanctioned custom, followed by most Institutions of learning, of annually making known their pretensions and presenting to the public their claims for patronage, the Faculty of the Female Medical College of Pennsylvania are inspired by very different feelings from those that attended their efforts one year ago. Then they were about to enter upon an untried path, to engage in a great experiment, in which were involved, to some extent, reputation and means. Then every step was attended with doubt, every effort with uncertainty. Though they had a proper conception of the greatness of the scheme, and a due appreciation of the benefit to mankind, that must accrue from its ultimate and complete consummation, they were not certain that the public would respond to their exertions, and sustain an enterprise so novel and so bold as the Medical education of Woman. But time has dispelled these gloomy phantoms. That which was an experiment is an experiment no longer; all doubts have been removed, and uncertainty has been reduced to certainty. The Female Medical College of Pennsylvania has survived her struggles for existence. She now stands boldly forth amongst the public Institutions of the Country, established upon a firm, unshaken basis.

Since the last Session the Corporators have filled the vacancies in the Faculty, occasioned by the resignations of Professors McCloskey and Chaloner, by judicious selections from a large number of applicants.

The Faculty take pleasure and pride in announcing, that the Matriculating Class, who honored the Institution by their attendance upon the first Course of instruction, was much larger than they had any right to expect. The manner in which the various branches presented were grasped, comprehended and matured by the Students, affords the most gratifying assurance that the idea of instructing Woman in the Science of Medicine is not a delusive one.

The general intelligence and entire respectability of the Class were such as to elicit the admiration of the Faculty. The quality of mind
displayed by them, through the whole Course, was that of an extraordinary character, and would have done credit to the most favored Institution of the Country. The Faculty are highly gratified in being able further to state, that from the numerous communications they are continually receiving from all parts of our widely extended Country, they are led to believe that Woman is beginning to appreciate her true position, and that amongst other things, she is willing to avail herself of the means here proffered, of elevating her condition, and entering this new field of usefulness and profit, for which her mental and physical organizations so eminently qualify her.

There is no position she could possibly assume, so well calculated to call into exercise those Heavenly qualities of mind, universally acceded to her, as at the bedside of a languishing fellow being. And more especially, in those cases of anxiety and suffering, sorrow and pain, peculiar to her own sex, might she be hailed as a ministering angel. And while she bears in her hand the balm for her physical woes, she carries treasured in her heart influences, which when scattered around, almost make the bed of suffering pleasant.

Give her knowledge commensurate with her natural qualifications; enable her to go forth, healing the sick and comforting the afflicted, and she will bless the world.

The impulsive feelings of her nature, to commiserate the unfortunate, to succor the distressed, and alleviate the miseries "to which flesh is heir," have been at all times assumed by her, and considered her special prerogative, while it not unfrequently happens, that the injudicious application of such remedial agents, as have been most familiar to her, has been attended with unintentional injury; when results the most satisfactory, to her and the recipients of her kind attentions, would have followed her well directed efforts, had she been better acquainted with the nature of the remedies, and the proper method of their administration.

The innate knowledge of her own abilities will inspire her with confidence; while accurate observations on the phenomena of disease will in due time enable her to win the respect and patronage of the community in which she may be located, and successfully compete with those who have so long occupied her place.

Having been made acquainted with human organization, she will be prepared to repel the advances of disease, in herself and others; while she will also be enabled to judge of the perils attendant upon certain morbid manifestations, and to make use of such remedies as may resist their progress or remove them entirely.
The study of Anatomy, Physiology and Chemistry, as ordinarily taught in our schools must necessarily be very imperfect. To those desirous of prosecuting such studies, an opportunity now presents itself, of becoming conversant with these interesting branches of Science, which has hitherto been denied to them.

Females have too often been deterred from such investigations by a too scrupulous delicacy, not to speak of the absurd arguments of those, the exercise of whose mental abilities seldom reach beyond the decorations of the boudoir and the toilet; and we find, that those, who have been deaf to such idle protestations of delicate imbecility, have shed lustre upon Literature and Science, proving, that their efforts were deserving of the well merited commendations of the learned, and their success, of the admiration of the envious.

The Pupils shall be allowed to introduce such of their female friends, as may desire occasionally to visit to the Institution, upon application to the Dean, or any member of the Faculty. None shall be admitted, save those of their own sex, and those immediately connected with the College.

No Pupil can be admitted, whose recommendations shall not be considered unexceptionable.

The necessity of such regulations must be obvious to all, and no exceptions will be made to the rule.

SPECIALITIES.

ANATOMY.

Professor Mosley will give a full Course upon this branch, and in addition to his demonstrations on the subject, will avail himself, as auxiliaries, of natural preparations, magnified paintings, papier mâché models, &c. The complex structures of the Ear and Eye, as well as every part of minute Anatomy, will be fully demonstrated, by means of appropriate enlarged apparatus, made with great care by distinguished artists of Philadelphia and Paris.

The Physiological relations and functions of the different tissues and organs will be clearly explained during the Course.

PRACTICE OF MEDICINE.

Professor Livezey will deliver as full a Course on the Prac-
ice of Medicine as the limits of the Session will permit, bringing to bear upon the subject the experience of a number of years devoted to an extensive Practice, in a locality favorable to the development of most of the diseases peculiar to our climate and Country; in addition to which he will also avail himself of the views and experience of the most approved authorities. He will illustrate his Course with numerous pathological specimens, drawings, engravings, &c. It will be his object to present the subject matter in a familiar manner, making his Lectures interesting as well as instructive.

The Professor of Practice will attend the College Clinique twice a week, and prescribe before the Class and give Clinical instructions.

OBSTETRICS AND DISEASES OF WOMEN AND CHILDREN.

Professor Longshore, in illustrating Utero gestation, from conception to its full period, will bring to his aid an extensive series of French models, just imported, as well as natural specimens of human Ova. The process of parturition with all the fetal presentations, natural and preternatural, also assisted and unassisted labor, together with most of the Obstetrical operations, will be fully and clearly illustrated by means of a splendid new Manakin.

In addition to a full and complete Course on Obstetrics, he will also give particular attention to such diseases of Females and Children, as come within the province of his chair.

INSTITUTES OF MEDICINE AND SURGERY.

Professor Gleason will illustrate his Lectures upon the Institutes of Medicine and Surgery with numerous wet and dried preparations, models in wax, oil paintings and colored engravings, life size, showing all the principal Surgical diseases, their pathology, and mode of relief, together with a large collection of Surgical instruments, apparatus, &c., for the treatment of fractures, dislocations and deformities.

Particular attention will be given to Clinical instruction in Surgery, and operations will be performed upon such cases as may present themselves before the Class, twice a week during the Session.

MATERIA MEDICA.

Professor Dickeson will make use of an extensive series of drawings illustrative of his Course, also a large collection of recent and dried specimens of Materia Medical, together with most of the compounds used in Medicine. General Therapeutics and Pharmacy will be fully considered.
CHEMISTRY.

Professor Johnson will give a full course of lectures on this subject, illustrating it throughout with ample experiments, and paying especial attention to the numerous and important medical applications of chemical science.

PRACTICAL ANATOMY.

The dissection room, which is large and well ventilated, will be under the supervision of the Professor of anatomy, assisted by Mrs. Hannah E. Longshore. Every facility will be given to the student for practical investigation.

CLINICAL

Arrangements have been made to afford students the opportunity of bedside practice, in addition to the regular college clinique, by the professors of practice and surgery.

THE ANATOMICAL MUSEUM.

This department of the institution has been greatly enriched, during the past season, by extensive additions of wet and dried specimens, illustrating every part of human anatomy and physiology; also by large importations of French models and wax preparations. Neither labor nor expense has been spared to render our facilities for imparting thorough medical instruction equal to those possessed by the best medical schools in the country.

The museum will be open, for the inspection of visitors, during the session.

BENEFICIARIES.

Applicants for admission whose circumstances will not admit of the usual expenditure, will be admitted under the same regulations as those governing other medical institutions, but no distinction in want of courtesy and attention shall be made between them and the other pupils.

LOCALITY.

The college building, arranged especially in reference to convenience in giving medical instruction, and guarding the health and comfort of the students, is located at No. 229 Arch street, below Seventh. It is the most central and respectable part of the city, while its situation is so retired as to be entirely free from the annoyance, that might otherwise be occasioned, by the noise and bustle of the street.

Students arriving in the city will call on the dean, at the college, for all information that they may desire. Strangers will be assisted in getting comfortable and respectable boarding houses.
Pupils will be admitted after they have completed their ordinary education; but cannot receive the degrees of the College, until they have attained the age of 21 years.

The candidate for graduation in this College, must have been engaged in the study of Medicine three years, two of which must have been under the supervision of a respectable Practitioner of Medicine. She must have attended two full Courses of Lectures, one of which must have been in this Institution.

The candidate, at the time of application for the Degrees, must present the graduation fee, with a thesis, written upon some Medical subject, either in English, Latin, French, Spanish, or German, which will in all cases be retained by the Faculty.

The graduation fee will be refunded, in case the applicant be rejected or withdraws her name.

Degrees will be conferred and Diplomas granted to the successful candidates, as soon as practicable after the close of the Course of Lectures.

The fees of this College are as follows:

$10.00

Graduation $15.00

The Lectures in this Institution will commence on Monday, September 1st, and continue four months.

The Lectures will be complete upon Anatomy and Physiology; Institutes of Medicine and Medical Jurisprudence; Theory and Practice of Medicine; Obstetrics and Diseases of Women and Children; Surgery; Materia Medica and Therapeutics; Chemistry and Clinical Practice.

The accommodations for boarders in Philadelphia are unsurpassed by any City in the Union. Good board may be obtained at from $1.50 to $3.00 per week.

The Janitor will be always present to attend to the requests of the Pupils.

For further information apply personally or by letter (post-paid) to

N. R. MOSELEY, M. D.,
DEAN OF THE FACULTY,
No. 229 Arch Street Philadelphia.
Pupils would do well to make a selection from the following works, recommended by the Faculty.

ANATOMY—Wilson, Morton, Horner, Quain & Sharpey.

PRACTICE OF MEDICINE—Stokes & Bell, Wood, Eberle.

PHYSIOLOGY—Carpenter, Muller.

OBSTETRICS—Ramsbotham, Dewees, Churchill, Meigs.

MATERIA MEDICA—Pererra, Royle, Wood & Bache.

SURGERY—Druitt, Cooper, Liston, Velpeau.

CHEMISTRY—Fownes, Kane, Graham, U. S. Dispensatory, Christison or Taylor on Poisons.
