EMELINE H. CLEVELAND, M. D., Sec'y.
1830 Mt. Vernon Street.
Announcement.

1870.

The Twenty-First Annual Session of the Woman's Medical College of Pennsylvania will open Thursday, October 13th, 1870, and continue five months.

The class of the past year has been larger than any heretofore in attendance; and the leading literary institutions of the country have been represented in it by their alumnae.

Several ladies of the class have availed themselves of the opportunity of making their studies more thorough and less exhausting, by choosing the provisional progressive course provided for in our announcement for last year. By that arrangement, those who attend for three Sessions or more, may, at their option, devote their time during the first year, and in part during the second, to the fundamental branches of Anatomy, Physiology and Hygiene, and Chemistry, theoretical and practical. Then an examination may relieve them of anxiety concerning these branches. The third year may be devoted to the more immediately practical subjects which have been entered upon in the lectures of the second year, including, besides the usual courses upon Therapeutics and Materia Medica, Practice of Medicine, Surgery, Obstetrics and Diseases of Women and Children, instruction upon Ophthalmology, Ausculta-
tion and Percussion, and such other special teaching as the resources of the College and Hospital may afford.

A year ago we chronicled the admission of our students to two of the great public Hospitals of Philadelphia, the Philadelphia (Blockley) and Wills' Ophthalmic Hospital, conducted by leading teachers and practitioners of medicine and surgery.

The educational advantages of the ladies have been further increased during the present year, by the opening of Pennsylvania Hospital to their visits—thus giving them access to all the great Hospital Clinics of the city.

Our class also enjoys the special advantages of the Woman's Hospital of Philadelphia. For practical as well as theoretical instruction, therefore, we believe that the opportunities afforded to lady students in this city, are unsurpassed elsewhere.

The deep interest manifested by the newspaper press of the country—we might almost say of the world, in the visits of the ladies to Pennsylvania Hospital, seems to make it proper to republish in this connection the statement made some months since by the Faculty of the College, explanatory of their position in regard to public clinics. *

Before any difficulties had been experienced or anticipated, the Faculty, for reasons stated in the card, had arranged with their class for its attendance on one only of the two clinic days of the week, and we are happy to be able to state, that, sustained by the managers of the Hospital, the general public sentiment and by many influential physicians, the ladies have continued, without a single intermission, to attend Saturdays' clinics, in accordance with the plan marked out before their entrance.

*See Appendix.
**Clinical Instruction.**

**WOMAN'S HOSPITAL OF PHILADELPHIA.**

The Woman's Hospital of Philadelphia, in its various departments treats between three and four thousand patients during the year. The daily morning clinic in the Dispensary, under the immediate charge of the resident physician, is open to the students of the College, and the wards of the Hospital also furnish them many opportunities for observing the symptoms of disease and the effects of treatment.

Under appropriate direction, students are permitted to attend cases of Obstetrics in the Hospital, and at the homes of patients.

There are also clinical lectures weekly, on Diseases of Women, Surgery, General Practice, and Ophthalmology, conducted by different members of the attending Board of Physicians, who are also Professors in the College. The surgical practice of the Hospital embraces a great variety of cases, and gives the students frequent opportunities for witnessing interesting operations and observing results. Among those operations may be enumerated: ovariotomy, the operation for vesicovaginal fistula, reduction of dislocations, etc., etc.

**PENNSYLVANIA HOSPITAL.**

For more than a century this has been a leading clinical school whose reputation is acknowledged in Europe as well as throughout this country.
As a Hospital for general diseases it stands unexcelled, while it presents special opportunities for the study of accident cases, great numbers of which are here brought together from the factories and rail-roads of the city, as well as from the mines and furnaces of the interior of the state.

**PHILADELPHIA HOSPITAL.**

This is one of the largest general hospitals and most prominent clinical schools in the country: it contains over one thousand beds. Bi-weekly clinical lectures are given in the amphitheatre, illustrated from the great and varied resources of its wards. Opportunities of a high order are here afforded for the study of morbid anatomy and clinical medicine.

**WILLS’ OPHTHALMIC HOSPITAL.**

This is one of the oldest and most important Eye Hospitals in the United States. Daily clinics are held, in which the leading operations of Ophthalmic Surgery are performed in the presence of the class, affording great facilities for improvement in this advanced specialty of medical practice.

**Practical Anatomy.**

The Dissecting Room, a building erected for this especial purpose, is large, well ventilated and well lighted. It is furnished with all needful appliances for effective work, and is open during the session, under the supervision of the Demonstrator of Anatomy; also during the months of April and May.

**Museum.**

The College Museum is well supplied with anatomical preparations, papier-mache models, and other material for illustration in the different departments of the Institution.
A large and well-selected Library of medical and other works is available to the students of the College, free of expense, being the Library of the Woman's Hospital, largely increased by the Library of the late Isaac Barton, which was bequeathed to the Hospital by the liberal donor,—"provided that the students of the Woman's Medical College of Pennsylvania shall have the privilege of using the books."

Resident Students.

Several students are annually appointed from the College-Class to reside in the Woman's Hospital. These assist in the medical work of its various departments, and thus enjoy large opportunities for the observation and study of cases.

Summer Advantages.

Philadelphia offers many advantages to such students as desire to pursue their studies systematically and practically during the College Vacation.

The Woman's Hospital, Pennsylvania Hospital, the Philadelphia Hospital (Blockley,) and Wills' Ophthalmic Hospital, will be accessible to ladies during the spring and summer, as well as private courses of instruction by competent teachers in the various departments of medical science.
Requirements for Graduation.

1. The candidate must have attained the age of twenty-one years, and must possess respectable literary attainments.

2. The candidate must have been engaged in the study of Medicine three years, and been during that time the private pupil for two years at least, of a respectable practitioner of Medicine.

   (Six months spent in a hospital will be considered equivalent to one year's study under a medical practitioner.)

3. The candidate must have attended two courses of Lectures on the following subjects:

   Chemistry and Toxicology.
   Anatomy and Histology.
   Materia Medica and General Therapeutics.
   Physiology and Hygiene.
   Principles and Practice of Medicine.
   Principles and Practice of Surgery.
   Obstetrics and Diseases of Women and Children.

   The two courses of lectures must have been attended in different years, and one at least in this College. She must also have taken two courses of instruction in Practical Anatomy.

4. The application for the degree must be made six weeks before the close of the session. The candidate, at the time of application, must exhibit to the Dean evidence of having com-
plied with the above requisitions: she must also present the graduation fee, and a thesis on some medical subject of her own composition and penmanship.*

5. In addition to the above requirements, the Faculty claim the right to refuse examination to an applicant on the ground of what they deem to be moral or mental unfitness for the profession.

6. Graduates of more than five years standing of other medical schools, approved by this, will be admitted to the lectures free of expense, except the cost of the matriculation ticket, unless they should desire to graduate, in which case they will be expected to comply with the terms required of second course students.

---

*At the option of the student, the final examination for the degree of Doctor of Medicine may be divided as follows:

a. A first examination, which may take place after attendance upon two courses of lectures on Chemistry, Anatomy, Physiology and Hygiene, and to include these branches; the result of which examination shall be recorded by the Secretary of the Faculty.

b. A second examination, which may occur after the remaining requirements of Rule Fourth (see Requirements for Graduation), shall have been fulfilled, and which shall embrace the remaining portion of the curriculum. The result of this second examination, added to the recorded result of the first, shall constitute the final vote of such candidate. This second examination must take place within three years after the record of the first examination.
The fees are as follows:

<table>
<thead>
<tr>
<th></th>
<th>First Year</th>
<th>Second Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>Matriculation Ticket</td>
<td>$5 00</td>
<td>$0 00</td>
</tr>
<tr>
<td>Professors' Tickets</td>
<td>105 00</td>
<td>105 00</td>
</tr>
<tr>
<td>Practical Anatomy</td>
<td>8 00</td>
<td>8 00</td>
</tr>
<tr>
<td>Graduation Fee</td>
<td></td>
<td>30 00</td>
</tr>
</tbody>
</table>

(Single Ticket, $15 00.)

No fee for Lectures after the Second Course.

Whole cost for two or more courses of Lectures and Graduation...$261 00

Each student must exhibit her tickets to the Dean within six weeks from the commencement of the Session.

For the encouragement of capable and well-educated women whose means will not allow of the usual expenditure, six students will be admitted annually, on the payment of twenty dollars for the Session—exclusive of matriculation, the demonstrator's and graduation fees. Such arrangements will be strictly confidential, and no distinction will be made in point of courtesy between the beneficiary and other students.

Ladies wishing to be received on this basis, must forward to the Dean, at least thirty days before the opening of the Session, application in their own handwriting, accompanied by satisfactory testimonials as to character, age, qualification, and want of means. The applicant must be not less than twenty, nor more than thirty-five years of age. The successful candidates will be duly notified.

It is deemed well to suggest to those ladies who may contemplate entering college, the advantage of consulting, at once, with some reliable physician, who may be able to give
systematic direction to their course of study, and furnish tes-
timony, when required, in regard to the time in which they
have been thus engaged.

Any lady who does not incline to become a physician, yet
desires instruction in some of the branches taught in a Medi-
cal College, as a part of a liberal education, may take the
tickets, and attend the Lectures of any one or more of the
Professors.

Board can be obtained convenient to the College.

Communications should be addressed to the Secretary of the
Faculty,

MRS. E. H. CLEVELAND, M. D.,
1800 Mount Vernon Street.

The following are recommended by the Faculty as Text
Books and Works of Reference:

CHEMISTRY. — Fownes (edition 1869), Miller, Brande & Taylor, Roscoe,
b Bowman’s Practical Chemistry.

PRACTICE OF MEDICINE. — Wood, Flint, Hartshorne, Da Costa.

ANATOMY. — Gray, Leidy.

OBSTETRICS. — Cazeaux, Bedford, Hodge.

DISEASES OF WOMEN. — Scanzoni, West, Hewitt, Thomas.

DISEASES OF CHILDREN. — West, Meigs.

SURGERY. — Smith’s Principles and Practice.

MATERIA MEDICA AND THERAPEUTICS. — Stille, Wood, U. S. Dispen-
satory, Parrish’s Practical Pharmacy.
Commencement.

The Eighteenth Annual Commencement was held at Musical Fund Hall, Philadelphia, on Saturday, March 13th, 1870, at 12 M., when the Degree of Doctor of Medicine was conferred by the President, T. Morris Perot, Esq., upon the following named ladies:

Card of the Faculty of the Woman's Medical College of Pennsylvania.

(Reprinted from public prints of Nov. 16th, 1869.)

As the relation of lady students of medicine to public clinics, and the views entertained by those entitled to speak for the movement for their medical education, are now extensively discussed in the public journals, it seems necessary for us to state our position.

Considering it decided that, as practitioners of medicine, the guardianship of life and health is to be placed in the keeping of women, it becomes the interest of society and the duty of those entrusted with their professional training to endeavor to provide for them all suitable means for that practical instruction which is gained at hospital clinics.

The taunt has heretofore been frequently thrown out that ladies have not attended the great clinical schools of the country, nor listened to its celebrated teachers, and that, consequently, they cannot be as well prepared as men for medical practice. We believe, as we have always done, that in special diseases of men and women, and in all operations necessarily involving embarrassing exposure of person, it is not fitting or expedient that students of different sexes attend promiscuously; that all special diseases of men should be treated by men in the presence of men only, and those of women, where it is practicable, by women in the presence of women only. It was this feeling, founded on the respect due to the delicacy of women as patients, perhaps more than any other consideration, which led to the founding of the Woman's Hospital of Philadelphia. There the clinical demonstration of special diseases is made by lady physicians, and before lady students alone.

As we would not permit men students to enter these clinics, neither would we be willing—out of regard to the feelings of men as patients, if for no other considerations—that our students should attend clinics where men are specially treated, and there has been no time in the history of our college when our students could intentionally do so, save in direct contravention of our known views.

In nearly all of the great public hospitals, however, by far the larger proportion of cases suited for clinical illustration—whether medical or surgical—is of those which involve no necessary exposure, are the results of diseases and accidents to which men and women are subject alike, and which lady physicians are constantly called upon to treat. Into these clinics, women also—often sensitive and shrinking, albeit poor—are brought as patients to illustrate the lectures,
and we maintain that wherever it is proper to introduce women as patients, there also it is but just, and in accordance with the instincts of the truest womanhood for women to appear as physicians and students.

Before the first visits of the ladies to Pennsylvania Hospital, we had arranged with them to attend on alternate clinic days only, so as to allow ample opportunity for the unembarrassed exhibition of special cases to the other students by themselves.

We encouraged our students to visit the hospital upon this view, sustained by our confidence in the sound judgment and high-minded courtesy of the medical gentlemen in charge of the wards. All the objections that have been made to our students' admission to these clinics seem to be based upon the mistaken assumption that they had designed to attend them indiscriminately. As we state distinctly and unequivocally that this was not the fact, that they had no idea or intention of being present except on one day in the week, and when no cases which it would not be proper to illustrate before both classes of students would necessarily be brought in, it seems to us that all these objections are destroyed, and we cannot but feel that those fair-minded professional gentlemen who, under this false impression as to facts, have objected to our course, will, upon a candid consideration, acknowledge that our position is just and intrinsically right.

The general testimony of those who attended the Saturday clinics last winter at the Philadelphia Hospital at Blockley, when about forty ladies made regular visits, was that the tone and bearing of the students were greatly improved; while the usual cases were brought forward and the full measure of instruction given, without any violation of refined propriety.

We maintain, in common with all medical men, that science is impersonal, and that the high aim of relief to suffering humanity sanctifies all duties; and we repel, as derogatory to the profession of medicine, the assertion that the physician who has risen to the level of his high calling need be embarrassed, in treating general diseases, by the presence of earnest women students.

The movement for women's medical education has been sustained from the beginning by the most refined, intelligent, and religious women, and by the noblest and best men in the community. It has ever been regarded by these as the cause of humanity, calculated in its very nature to enlarge professional experience, bless women, and refine society.

It has in our own city caused a college and a hospital not only to be founded, but to be sustained and endowed by those who have known intimately the character and objects of this work, and the aims and efforts of those connected with it. It has this year brought to this city some fifty educated and earnest women to study medicine; women who have come to this labor enthusiastically but reverently, as to a great life interest and a holy calling.

These ladies purchased tickets, and entered the clinic of the Pennsylvania Hospital in no obtrusive spirit, and with no intention of interfering with the legitimate advantages of other students. If they have been forced into an unwelcome notoriety, it has not been of their own seeking.
